

Frozen Layout

- Start w/a float left layout
- Put all content in a div
- Set a width on that div
- We now have a **frozen layout**
 - Nothing can move...frozen in place!
- Flow
 - header
 - main (not in the flow)**
 - sidebar
 - footer
- Advantages
 - Content in order in XHTML.
 - No weird element expansion issues.
- Disadvantages
 - Lots of empty space on right in a wide browser window.
